

## *Lets use leslikes*

**LesLikes (Lv)** are local expression system of likes. Newcomers to the system are rewarded with **LesLikes (Lv)** and, additionally, the **LesLikes (Lv)** are periodically and equally distributed between the members of that system and used to express how much the member likes something, by giving to that thing number of her/his **LesLikes(Lv)**.

As part of the paradigm shift to services from products and for those having less, but of which opinion is still important, the Lv are not used for transferring ownership over things but to express the value of using such things. *Usecase*, where x points to or is y and also when y is a licensed membership:  $A-20Lv(x)->B$ , while  $C\text{-term-of-use}(y)->A$ .
