

## In 6 points: Become stronger customers of, or members in, any organization by becoming peer (equal) shareholder over its assets

The ComComism's home » Register your organization for becoming comcomized » Peer Owners - Your Net (V1) » Content - Peer Owners » What Is A Comcomized Unit - Peer owners » In 6 points: Become stronger customers of, or members in, any organization by becoming peer (equal) shareholder over its assets

"ComCom" (or ComComized unit), standing for Common Company, is a co-ownership company, where each of its owners is either a peer or ordinary owner and its type is one of the three: [Scomcom\(Static-ComCom\)](#), [Icomcom\(Indi-ComCom\)](#) or [Dcomcom\( Dynamic-ComCom\)](#) - Here are the 6 points explaining what is a ComCom:

- **1 Tradability:** Based on a [contract](#), any ComComized unit guarantees equality between its peer members being its owners, sitting at its top and owning equal share of it - like shareholders having equal number shares, each of which is able to sell the share while the price reflects the value of the whole unit, at any time and price and, except in the case of Icomcom, to anyone.
- **2 Recursive nature of the contract:** Buyers of any of its shares must agree with all the points establishing any ComComized unit, where these points are unchangeable and prior to any other agreement about the unit.
- **3 Coherent Layering:** Each peer owner is either a person or a ComComized unit and has exactly equal number of shares as any other peer owner of the same unit,
  - where per each unit - directly or indirectly, holding more than one position is forbidden and
  - where each ordinary owner of Scomcom is either a person or a legal body other than comcom.
- **4 The d:** Added together, all the peers own the whole unit or only a portion of it, as the ratio of the peers' portion is d (as  $d * 100$  is the ratio's percentage),
  - where the rest of the unit (if any) is owned by all its ordinary (non-peer) owners and
  - where the ratio d of any Scomcomized unit is only once defined in the creation of the unit.

$d * i = c * n$					
 <b>d=0.30</b>	<b>d</b> (as in Decentralization ) is the ratio of the portion held by all the peer owners	<b>i</b> is the number of Issues shares	<b>c</b> is the Count of all peer owners	<b>n</b> is the number of shares per each peer owner	 <b>d=1.00</b>

- **5 Peers' autonomy:** The number of peers holding it and regardless the value of d must be agreed among the peers independently.
- **6 Flexibility of the d:** In the Icomcomized or Dcomcomized units, the number of its members is as the number of all its shares and the number of shares per each peer owner is always less than, or equal to, one and is defined by the peers autonomously,
  - where each ordinary owner can only be a comcom of which peer owners are members in the held unit and which is
    - either of the same type of the held unit
    - or is a Scomcom of which d equals one,
  - where any member can always switch back to become a peer owner in the held unit and
  - where selling shares of an Icomcom can only be to its members as a collective, as its representation is defined by their autonomy and so that only as collective they can sell the share to a new becoming member in it.
